

THE ECONOMICS OF CLIMATE ACTION

HOW CLIMATE ACTION PLANS CAN HELP THE ENVIRONMENT, THE ECONOMY, AND YOU.

CAP

WHAT ARE CLIMATE ACTION PLANS?

Climate Action Plans (CAPs) are a government response to climate change. They are policies outlining sustainable environmental, economic, and social goals for the community.

JOBS, JOBS, JOBS

By following the Paris Agreement, a **net 26 million jobs** will be created by 2030 in energy efficiency, sustainable transportation, renewable energy, and the circular economy.

THE ECONOMY BENEFITS

There is **\$43 trillion** (USD) to be **gained** by the global economy by 2070, with **\$885 billion** going to the US alone from climate action.

IT ADDS UP - MIAMI, FL

A one-time bond of \$192 million for sea-level rise and flooding protection **avoids \$3.2 billion** in structural losses by 2040 and **saves \$385 million** in tax revenue by 2070!

FUTURE OUTLOOK

CAPs are comprehensive strategies for bringing a community to a more sustainable future. They outline the area's main climate challenges, emissions, energy use, green economy, equity considerations, and more.

With environmental, social, and economic feasibility, CAPs are the policy of the future!
